Sex-chromosome aneuploidy (female): XO / XXX

chrX · UAR[X] vs Z-score[X] · orig reference

Decision rule

- Z-score[X]: Z < −5.5 → XO signal; Z > 4.5 → XXX signal; otherwise neutral.
- UAR[X]: < 5.20 XO-detected | 5.20–5.25 XO-suspected | 5.25–5.49 normal
  5.49–5.52 XXX-suspected | ≥ 5.52 XXX-detected
- Detected only when both axes are in the Detected zone; one axis alone → Suspected.
- Opposite signals on the two axes (e.g. low Z with high UAR) → Not Detected.
